PROFESSIONAL SUMMARY

Aspiring Python Developer and Data Analyst with hands-on experience in Python web development, data analysis, machine learning, and interactive dashboard development. Skilled in Python, SQL, Django, FastAPI, Pandas, NumPy, Power BI, and Streamlit, with practical experience building full-stack applications and data-driven solutions. Familiar with RESTful API design, CRUD operations, role-based authentication, database management, data preprocessing, model evaluation, and end-to-end machine learning workflows.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript, HTML, CSS

Frontend Development: HTML, CSS, Streamlit, Responsive UI Design, Component-Driven UI Design, UX-Focused Development

Backend Development: Python, Django, Flask, FastAPI, RESTful API Design, CRUD Development, Role-Based Authentication

Databases and Cloud: SQLite, AWS

Data Analysis and Machine Learning: Pandas, NumPy, Scikit-learn, Power BI, Matplotlib, Feature Scaling, Data Preprocessing, Model Evaluation, GridSearchCV, Pickle, Evidently AI

Tools and Practices: Git, GitHub, VS Code, Jupyter Notebook, Google Colab, Debugging, Problem-Solving, Data Visualization

PROJECTS

Ticket Master – Full-Stack Event Ticket Booking and Management System *Python, Django, SQLite, HTML, CSS*

- Developed a full-stack event ticket booking and management platform using Django, implementing role-based authentication for Admin, Organizer, and User account types.
- Implemented end-to-end CRUD operations for event creation, ticket management, bookings, refunds, and user administration using Django ORM and ModelForms.
- Built event search, image upload, ticket categorization, and dynamic pricing features to support flexible event management and booking workflows.
- Implemented booking history tracking and data validation mechanisms to maintain data integrity, and designed role-specific access controls for secure account operations.

Cancer Prediction Using Machine Learning *Python, Pandas, NumPy, Scikit-learn, Matplotlib, GridSearchCV*

- Designed and implemented an end-to-end machine learning pipeline for breast cancer tumor classification using Python and Scikit-learn.
- Performed data preprocessing, feature scaling, and exploratory data visualization to prepare and analyze the medical dataset.
- Compared multiple machine learning algorithms and evaluated model performance to identify the best-performing classification approach.
- Optimized the selected model using GridSearchCV for hyperparameter tuning and saved the trained model using Pickle for reuse.
- Monitored model performance using Evidently AI to support ongoing evaluation of the machine learning workflow.

EDUCATION

Pimpri Chinchwad University 2023 – Present
Bachelor of Technology in Computer Science and Engineering CGPA: 7.26 / 10

Abhishek Arts, Commerce and Science Junior College 2021 – 2023
Higher Secondary Education, Science Percentage: 70.50%

Abhishek Vidyalayam School 2021
Secondary School Education Percentage: 83%

CERTIFICATIONS

- AWS Academy Cloud Foundation – May 2024
- Red Hat System Administration 2 and 3 – July 2024
- Getting Started with AI, IBM – November 2024
- Samsung Innovation Campus – January 2026
